What parents need to know about screen addiction

SMARTPHONE ADDICTION IS A RECOGNISED HEALTH CONDITION

Children as young as 13 are attending ‘smartphone rehab’ following growing concerns over screen time. There are now help centers in the UK which deal with screen addiction for children and adults showing the seriousness of device addiction.

IT CAN CAUSE SLEEP DEPRIVATION

7 out of 10 children said they had missed out on sleep because of their screen habits and 40% said they had neglected school work as a result. It is important that children get the sleep they need in order to focus the next day.

CONFIDENCE, SUPPORT & ACCEPTANCE

The Children’s Commissioner report ‘Life in Limbs’, explored how children aged 8–11 are using social media today. It showed that children are using their devices to speak to their online friends about their problems and seek acceptance and support, removing face to face interactions.

APPS CAN BE ADDICTIVE

Apps have been designed with ‘psychological tricks’ to constantly keep grabbing your attention. One example of this is on the app Snapchat, where you can gain ‘streaks’ when interacting with your friends. If you don’t respond, you lose the streak. This addictive nature of apps aims to encourage children and keep them coming back for more.

LIMIT SCREEN TIME

In today’s digital age, technology is an important part of a child’s development. However, being connected to their device will mean they are missing out on a lot of social interaction with their friends. Rather than banning them from using their devices, try setting a screen time limit. Work out what you think is a suitable and healthy amount of time for your child to be on their device per week. Remember that your child may need to use devices for their school homework so only set screen limits on recreational time on their device. As you have established this, have the conversation with them to discuss why you are implementing screen limits. If there will be others in your child’s friendship group who will not have screen limits set and will be sending messages when they do not have access to their phones.

ENCOURAGE ALTERNATIVE ACTIVITIES

It may seem like an obvious solution, but encouraging children to play with their friends, read a book, or playing outdoors will help them realise they can have fun without their device. Playing football, trampolining, camping, going for a walk or becoming one of the healthy replacements for screen time. Try to join them in their outdoor activities to show your support.

LEAD BY EXAMPLE

Children model their behavior on their peers, so if their parents are constantly on their device, they will see this as acceptable. Try limiting your own screen time and follow the same rules you have set for them. If you have asked your child to not use their device at the table, make sure you don’t. Try setting house rules that the whole family abide by.

LESS TIME MEANS LESS EXPOSURE

There are many risks associated with devices, such as cyberbullying, grooming, inappropriate content etc. Less time spent on a screen means that a child will be less exposed to these risks.

MOBILE-FREE MEAL TIMES

Have you tried to settle your child by giving them a tablet at the dinner table or restaurant? This may seem like a quick fix to calm them down but in reality, it is encouraging them to use their device as a distraction from conversation and dealing with their emotions. We suggest removing all technology from the dinner table and having conversations with your family about how their day has been.

REMOVE DEVICES FROM THEIR BEDROOM

Setting a rule about removing devices from bedrooms will help your child to get the sleep they need and be more focussed the next day at school. 20% of teenagers said that they wake up to check their social network accounts on their devices. Even by having a device switched off in their bedroom, they may be tempted to check for notifications.
